

# IGT ADVANTAGE™

## ADVANTAGE Analytics Real-Time

See how your slots are performing in real time.

With ADVANTAGE Analytics Real-Time, you can analyze machine and game theme performance based on event data that the system subscribes to directly from the gaming floor. The system's repository of game events allows for analysis of event trends that are beyond the scope of other products.

Your Security department can also get real-time notification of EGM security events for rapid response.

ADVANTAGE Analytics Real-Time uses the same 3-D mapping capabilities as ADVANTAGE Analytics Core, eliminating the need for additional CAD software. The system is easy to set up, and the graphical interface makes it easy to gauge floor performance at any time.

### The 3-D Floor Map makes it easy to perform key tasks:

- See quick snapshots of game play
- View trends over a rolling 24-hour period
- Analyze performance by section, bank, or machine, current win, and hold percentages
- ...And more

### Features

- Visualize game location and floor performance in real-time.
- Analyze carded and uncarded play, net win by denomination, specific machine events, and more.
- User-friendly graphical interface that is easily grasped.
- No CAD knowledge required.
- Ability to import native computer-aided design (CAD) files directly into the application.
- Text labeling for any performance summary can be displayed in tandem with color codes "painted on" by analyzers.

### Benefits

- Get a better view of how your slots are performing than you would by walking the floor.
- Gain actionable intelligence to help optimize game change decisions.
- Respond to security events or performance issues as they occur to reduce downtime.

### Product Dependencies

- IGT ADVANTAGE 8.2 and newer.
- SQL Server 2012 R2 and newer.

See your entire floor's performance  
as it's happening.

Gather important player insights  
that can drive results.
