Health Check and Tune-Up

Restore system operations to optimal performance.

Systems are the engine of your operation. And just like a car's engine, skipping maintenance can lead to failure down the road. Over time, systems need to be evaluated and adjusted to make sure they run at top levels and prevent system downtime. IGT provides services to analyze and remediate issues with Advantage and/or server-based systems.

Drive Business Value

Proactively identify and improve system performance, reducing service interruptions. Discover areas needing attention with a Systems Health Check, and resolve those issues with a Systems Tune-Up.

Dependable Experts

IGT is the world leader in gaming products and services. We have the highly trained and skilled resources you can count on to deliver quality work. We provide responsive service through onsite, online access and phone support services.

Systems Health Check:

The Health Check package is a snapshot of your current system. You'll receive a comprehensive and easy-to understand system report enabling you to make informed decisions regarding the health of your system.

Systems Tune-up:

The results from the Systems Health Check findings report will be used to scope your personalized Tune-Up. Not only will the Tune-Up improve performance and increase stability, but you can use this opportunity to better align your system to your specific business and player needs.
